

Positioning For:  11MH

Soybeans:

93B82

RELATIVE MATURITY **38**

Maximizing Local Performance

Grain characteristics make 93B82 attractive for identity-preserved contract opportunities. Agronomic strengths include exceptional field emergence and good harvest standability. Disease package boasts strong tolerance to brown stem rot and good Phytophthora field tolerance. Contains the Rps1k gene for resistance to Phytophthora root rot.

Management Comments

Use caution when planting in fields with a history of soybean cyst nematode.

Key Environments

White Mold-Prone Environments Insufficient Data

Suitability

High Residue Suitable
 Manage Appropriately
 SCN-Prone Environments Suitable

Soils

Drought-Prone Soils Suitable
 Early Planting/Cool Soils (w/SDS) Highly Suitable
 High PH Soils Suitable
 Highly Productive Soils Suitable
 Poorly Drained Soils Suitable

11MH Updated as of 02/2014

IMPORTANT: Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Positioning information is based upon historical observations and analysis of traits by Pioneer Agronomists and Research Managers. Trait scores are assigned by Pioneer Research

Managers. Scores are based on period-of-years testing through 2012 harvest and were the latest available at time of printing. Some scores may change after 2013 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. Products within a family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com/products or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product.

Always follow grain marketing, stewardship practices and pesticide label directions. Varieties with the original Roundup Ready® trait (RR) and the Genuity® Roundup Ready 2 Yield® (RR2Y) trait contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate. Genuity®, Roundup®, Roundup Ready® and Roundup Ready 2 Yield® are registered trademarks of Monsanto Technology LLC used under license. Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible. Varieties with the DuPont(TM) STS® gene (STS) are tolerant to DuPont(TM) Synchrony® STS® and DuPont(TM) Classic® herbicides. This technology allows post-emergent applications of sulfonylureas (see herbicide product labels) without crop injury or stress. NOTE: A soybean variety with a herbicide resistance trait does not confer resistance to all herbicides. Spraying herbicides not labeled for a specific soybean variety will result in severe plant injury or plant death. Always read and follow herbicide label directions. DuPont(TM), Synchrony®, Classic® and STS® are trademarks of DuPont or its affiliates. Varieties with the LibertyLink® gene (LL) are resistant to Liberty® herbicide. Liberty®, LibertyLink® and the Water Droplet Design are trademarks of Bayer. (-) = Variety does not contain a herbicide resistant gene.
